Mysql

👤 PROFILE

Passionate about Cloud & AI technology, I am a self-directed Technology Manager with a proven track record of success in enhancing business processes within the logistics domain. With a proactive ownership mindset and a commitment to Agile methodology, I have consistently led high-performing teams to success in app development and modernization endeavors. Proficient in implementing cutting-edge technologies, I specialize in driving innovation and efficiency. My skill set encompasses a distinctive blend of technical expertise, strategic vision, and hands-on leadership, all aimed at delivering solutions that not only meet but exceed business objectives and customer expectations.

📁 EMPLOYMENT HISTORY

Manager, Software Engineering, Freight Brokerage at RXO, Chicago, IL

Jun 2023 – Till date

- Lead two high-performing teams driving modernization and automation initiatives for RXO's Freight Brokerage platform.
- **Modernization Team:** Spearheading end-to-end transformation of the Transportation Management System (TMS), migrating legacy applications to **Tanzu Kubernetes** and **Google Cloud Platform (GCP)** to enhance scalability, resilience, and maintainability.
- **RPA Team:** Providing technical leadership on **UiPath** automation to streamline integration with customer TMS systems—automating load retrieval and order creation & other business processes.
- Delivering architectural guidance, design reviews, and hands-on support to ensure robust, scalable, and cloud-native solutions.
- Improved platform performance and reliability, achieving a **25% reduction in system downtime** through modernization and observability enhancements.
- **Tech Stack:** .NET (Core), **Kafka**, **RabbitMQ**, **Couchbase (NoSQL)**, **REST APIs**, **Kibana**, **Grafana**, **New Relic**.

Lead Engineer API Solutions at RXO, Chicago, IL

Dec 2021 – Jun 2023

- Working on developing API solutions for customer/carrier integrations with Boomi/ Apigee API gateway and onboarded many customers & carriers. Partner with vendors, customers, and product analysts to design scalable solutions

- Standardized the APIs, improved the customer onboarding process & key in troubleshooting the operational issues, collaborated with different teams of all the business units.
- Built the API team by cross training the members with Apigee & Boomi,
- Completed Managers Fundamentals Program from **RXO University**, Working on GCP Developer certification & attended trainings on Couchbase.
- Working on migrating APIs from Boomi gateway to Apigee as seamless transition without impacting customers. The apigee solution is more robust, scalable, and with better API analytics.
- Key player in troubleshooting with various teams, good in collaboration with stakeholders, team members & communicating effectively.
- Conducted training session on Unit testing and best practices for different teams, presented tech talk on visualization of software architecture through diagrams as code.
- Tech stack – Dell Boomi, Google Apigee, GCP Cloud Logging, Kibana, Cloud run, Dot net technology.

Solutions Lead at Saggezza Inc, Torrance CA

February 2019 — Dec 2021

- Worked with the client - **ePost Global shipping** (<https://epostglobalshipping.com>) to develop and support International logistics shipping solutions with integration to various vendors like UPS, Canada post ,USPS services etc...
- Improved business process of overall workflow of customer onboarding, parcel processing, manifesting and tracking and enabling reporting capabilities.
- Improved the development time, by introducing low code environment with integration to Azure services. This helped in easier maintenance & fast implementation for newer integration.
- Standardized the development processes, re-architect legacy applications to utilize the new offerings from cloud for better maintainability & scalability.
- Worked with the stakeholders and product owners to brainstorm new features and drive the solutions from ideation to implementation.
- Decoupled key functionalities from Monolithic application into separate components.
- Leading 4 agile teams, mentor, conduct code reviews, run sprints and work on complete SDLC.
- Played a key role in migrating the applications from on-prem to Azure.
- Analyzing and identifying applications for cloud assessment and fitment, mapping the workloads across IaaS, PaaS and private clouds
- Currently working on business automation for the parcel processing which eliminates manual labor & improves efficiency.
- Technology stack includes Asp.net MVC, C#, WCF, Web API and SQL server, Azure storage, compute, Logic Apps, API Management, Azure DevOps CI/CD, server-less Azure functions with Agile scrum methodology & Test driven development, SOLID principles.

Solutions Lead at Saggezza Inc, Chicago, IL

April 2014 — February 2019

- Worked with the client - **LSC Communications** (<https://www.lsc.com/services/postal-optimization>) on developing solutions for co-mail optimization using various sortation schemes from USPS, reporting tools.
- Architected and developed file mapping solution to identify and map the fields to columns of the file in run time.
- Provide technical leadership in designing and implementing large scale, complex enterprise applications requiring high performance and availability.
- Worked on proposals for converting a legacy app to Micro-services architecture to improve scalability and maintenance.
- Experience in leading team with Test driven development & SOLID principles following Agile development methodology.
- Experience in Asp.Net web applications, MVC, Web-API, Web-service, WCF Service Development and windows services, SQL server, Oracle databases, SQL Reporting and Integration services, integration with SAP services.
- Helped the business by designing a board game which helped the new hires to understand the business quickly in a fun way.

Project Lead at Saggezza Inc, Bengaluru, India
